

12.7.4 Visit-in-Person Queries and User Location

People use search engines to look for **Visit-in-Person** information, such as finding nearby coffee shops, gas stations, ATMs, restaurants, etc.

Some queries clearly “ask” for nearby information or nearby results (e.g., businesses, organizations, other nearby places). Some queries are not asking for nearby information or nearby results. Here are some examples.

Queries with Visit-in-Person Intent	Query with Non-Visit-in-Person Intent
 <p>“I want to find a car repair shop.”</p> <p>Query: [car repair shop] Locale: English (US)</p>	 <p>“How tall is Mount Everest?”</p> <p>Query: [how tall is mt everest] Locale: English (US)</p>
 <p>“I need to find a gas station right away!”</p> <p>Query: [gas stations] Locale: English (US)</p>	 <p>“I would like to take an IQ test online.”</p> <p>Query: [iq test] Locale: English (US)</p>
<p>More examples: [pizza], [yoga class], [grocery stores], [movie showtimes], [car repair], [dentists], [bank of america atm locations], [library near me]</p>	<p>More examples: [boston red sox], [scrabble cheat], [definition of sedentary], [aapl], [beyonce], [minecraft], [small dog breeds], [dance videos], [oscars], [silly jokes], [bank of america login]</p>
